

## Solar Topps

CASE STUDY  
SOLAR TOPPS

### Solar Topps relies on Centrosolar's C-Series PV Module

Solar Topps is a family-owned and operated all-in-one solar energy solutions provider dedicated to providing Arizona and other markets a complete turnkey approach to their solar needs. From complete energy analysis, precise engineering and design services, permitting, utility coordination to quality system installation and seamless integration, Solar Topps completely manages the solar electric project from beginning to end. Their approach to solar energy offers residential and commercial customers the quickest payback and highest Return On Investment (ROI) in the alternative energy business.

**Neal Uppal, Solar Topps President says,** "The C-Series looks sleeker and cleaner on the rooftop and our homeowner customers have confidence that German-engineered panels will have the best technology and highest reliability available. The warranty associated with the C-Series is the best in the business, as well."

"We use Centrosolar America products for more than half of our commercial and residential installations. Centrosolar America provides a German quality that is evident in everything. The products arrive at the jobsite in perfect condition every time and we know the Centrosolar America team is always available to provide any service or troubleshooting we might need. We see the C-Series as yet another Centrosolar America product that will be an important part of our company growth."

**The C-Series** is Centrosolar America's latest in its series of German-engineered and manufactured PV modules. The panel is made with triple-layer back sheets and thermally strengthened, high-impact low iron glass, coated with a patented nano-power anti-reflective coating that improves energy yield. The anti-reflective glass harvests more kWh of energy, delivering reliable and peak performance power levels in cloudy and low-sun areas and under the adverse weather conditions in North America and, notably, in marine coastal installation environments where salt-spray is an issue. The module has a best-in-class power tolerance rating of 0/+3%, which translates into more power out of the module per DC wattage than other comparably rated modules. Centrosolar America sets new warranty standards in the industry with the C-Series, including a 10-year product warranty and a 26-year @ 80% power-loss performance warranty.

### About Centrosolar America, Inc.

Centrosolar America, Inc. is a wholly owned subsidiary of CENTROSOLAR Group AG, headquartered in Munich, Germany. CENTROSOLAR Group AG is a publicly traded market leader in photovoltaic module manufacturing, mounting systems, and solar glass production with over 1,000 employees in offices in North America (Phoenix, AZ, San Francisco, CA, and Edison, NJ), and throughout Europe. Centrosolar America, Inc. offers modules, inverters and racking components, and markets a line of installation-ready packaged photovoltaic systems for residential and commercial grid-tied roof installations.

### About Solar Topps

Solar Topps offers a complete turnkey approach to solar installations. From complete energy analysis, precise engineering and design services, permitting, utility coordination to quality system installation and seamless integration, Solar Topps completely manages the solar electric project from beginning to end. Their approach to solar energy offers residential and commercial customers the quickest payback and highest Return On Investment (ROI) in the alternative energy business.
